

MONT. NO:16, TOPBEARING AND BANNERARM

Drill a 22mm hole about 1-1,2m from bottom of the flagpole put on the UP/DOWN sticker.

The wire is bend over the pulley.

Topbearing is mounted in the top of the flagpole and tightened with the spanner.

The wire is mounted on the swivel with the wire lock and pulled true the flagpole. The fitting is put into the flagpole by a tube with a 8mm thread in the end.

The banner arm is assembly with the 2 guide straps in top and bottom.

The extension arm is mounted by the clips.

Flange and nut is turned on the fitting and tighten by using the square brass part which fit the nut.

The banner arm is put down over the flagpole and the wire is fitted with the wire lock.

Cut the wire of in the top of the flagpole So, it's about 16cm outside the flagpole.

Put the wire true the topbearing and use a screwdriver to get the wire out.

The finial is mounted and tightened.
